Nature Publishing - Build A Long-term Relationship with High-impact Research

Date and time: Monday, June 18, from 4:00pm to 5:30pm

Venue: Lecture room, ITbM

Language: English

Abstract

The mission of Nature is to serve scientists through prompt publication of significant advances in any branch of science and to ensure that the results of science are rapidly disseminated to the public throughout the world. Now Nature Research family has 47 Nature-branded journals covering a broad scope of research fields varying from physical sciences, life sciences, and social sciences. Nature Plants, as one of the Nature Research journal, is an online-only, monthly journal publishing primary research concerning all aspects of plants. In addition to publishing original research, Nature Plants publishes magazine contents to provide a forum for the reporting and discussion of news and issues concerning plant science. All editorial decisions are made by a team of full-time professional editors with different expertise in plant research. The editorial standards and consideration, the publication pathway and criteria of Nature Plants as well as different Nature Research journals will be disclosed during the presentation.
