

GTR-IGER SEMINAR

No Strain No Gain

Abstract: This seminar will present how the Njardarson groups investigations into catalytic ring openings of strained rings led them through serendipitous discovery to investigate asymmetric anionic reaction cascades, which in turn opened the door for new natural product target applications and eventually new exciting asymmetric rearrangement studies.

**Professor Dr.
Jon T. Njardarson**

**Department of Chemistry
and Biochemistry,
University of Arizona
USA**

3:00 pm ~ 4:30 pm

Monday, 25th February, 2019

Lecture Room, ITbM 1F

Host: Kazuaki Ishihara (x3331)
