

Trip Report for International Conference ICPP-12

工学研究科 有機・高分子化学専攻

博士後期課程 3年 劉 思雨

Destination: Madrid, Spain

Travel period: 2022.7.9~2022.7.15

Purpose: Participation in the International Conference on Porphyrins and Phthalocyanines (ICPP-12), to gather cutting-edge information on porphyrin chemistry and report on research results through poster presentation.

Abstract: This conference started in 2000 in France as an international symposium on porphyrins and phthalocyanines. During the five days of the conference, there were many lectures divided into several sessions covered structure, property, and application of porphyrins and phthalocyanines from the morning to the evening. More than 150 poster presentations were made in two days at a congenial atmosphere, and active exchanges and discussions were developed among researchers from different countries.

Impressions: There is much to be gained from attending ICPP-12, where researchers from around the world discuss cutting-edge research on porphyrins and phthalocyanines. This is my first time to attend such a large international conference. There were many lectures and poster presentations covered a wide range of fields and I have learned a lot about the latest porphyrin chemistry from around the world. During my poster presentation, I had a lively discussion with researchers from different countries, who gave me a lot of suggestions that will be useful for my future work. Finally, I would like to express my deepest gratitude to my supervisor, Prof. Hiroshi Shinokubo, for giving me this opportunity and to the GTR program for their support.
